.NET & Full-stack lead developer with a focus on identity and access management systems.

Experience

Cegid

Lead developer - Cegid Account

2022 - Present

- Implement an employee access management system for super administrators and super readers to improve the security and efficiency of internal processes.
- Deliver data quality monitoring and lead initiatives to improve data integrity.
- Lead the resolution of complex issues across multiple organizations (customer IT, service providers, internal teams).

Talentsoft

Senior developer - SSO module

2018 - 2022

- Design and implement a new rollover process for OIDC & SAML certificates, reducing the number of issues raised by a factor of ten compared to the previous years.
- Implement SAML 2.0 encryption & certificate management processes used by eight clients.
- Design and implement an SSO configuration management system used by customer project teams to manage the SSO configuration of their customers.

Mid-level developer - Recruiting module

2016 - 2018

- Analyze and fix performance issues on a multitenant SaaS web application (40000 rpm). Monitor production behavior of new features using NewRelic.
- Migrate a JavaScript/Knockout stack to TypeScript/React/Redux. Deliver training on front-end technologies.
- Migrate background job from visual cron to a system based on Hangfire that provided better reliability and scalability.

Junior developer - International R&D team

2014 - 2016

- Design and implement a REST API for a white-label job board website.
- Create tools to help the localization team.

eFront

Junior developer - ERM R&D team

2012 - 2014

Develop new features for an Enterprise Risk Management web application.

DXO

Image science engineer - Image Science team

2009-2012

- Using a research paper, write the functional specifications of an embedded adaptive color correction IP.
- Implement a prototype (Python/C++) and associated calibration tools (C++).

Education

Ecole Centrale Paris - Engineering school
Embedded system development

2005 - 2009

KTH - Stockholm
Image processing

2007 - 2008

Technical skills

Backend development

C#, .NET, ASP.NET Core, Entity Framework Core

Front-end development

React/TypeScript/Tailwind CSS

API Design

REST, Open API, GraphQL

Authentication protocols

OIDC, SAML 2.0

Access Management

RBAC, API scope design, Microsoft Entra ID

Performance analysis

.NET profiling, SQL execution plan analysis

Observability & Monitoring

Application Insights, OpsGenie, Dynatrace

Languages

French *Mother tongue*
English *Highly Proficient*

Personal projects

Digital version of the Cubirds board game - [GitHub](#)

.NET Core (server) and React/TypeScript (client)
Built during the pandemic with permission from the publisher. Includes online multiplayer and AI opponents.

Virtual Tabletop for the Mothership RPG - [GitHub](#)

React/TypeScript & WebRTC
Widely used in the community before an official paid tool was released.

Command line argument parser library - [GitHub](#)

Haskell - [published on Hackage with more than 2000 downloads](#)

Personal hobbies

Graphic novels
Board games
